## Thank you for your purchase!

Getting to know this product

Heavy Robot Arm

The heavy robot arm is designed for lifting high payloads and has a range of motion that that can controlled via the custom Robot Arm Controller.
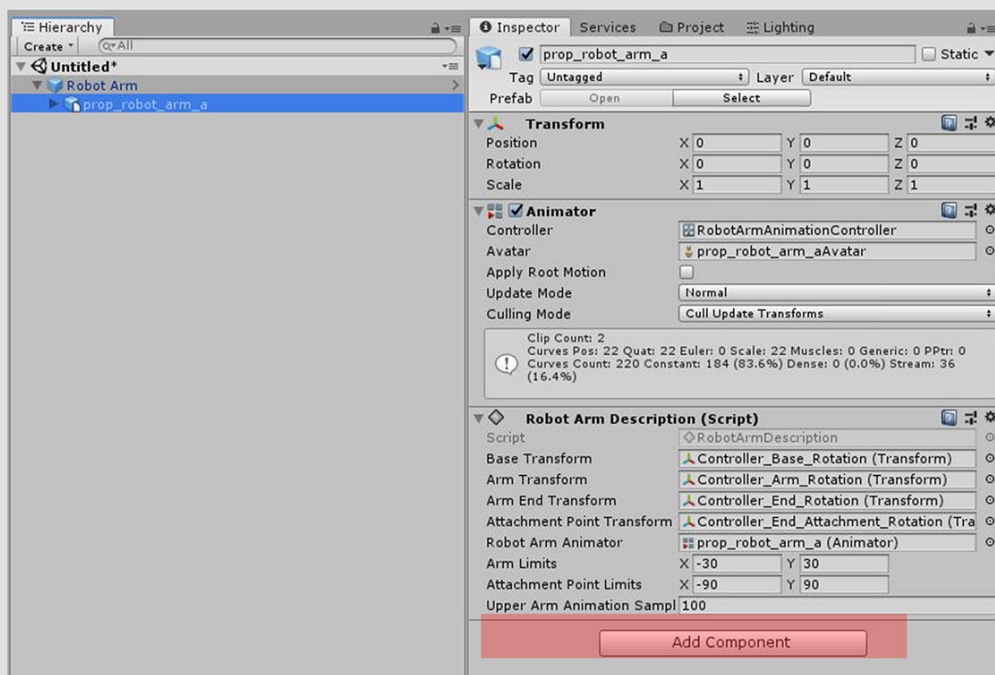

The functionality of this controller allows you to control the following parts of the robot:

The sliders and spinners control each of the highlighted areas (above) and should be used for all movement and creation of animations.
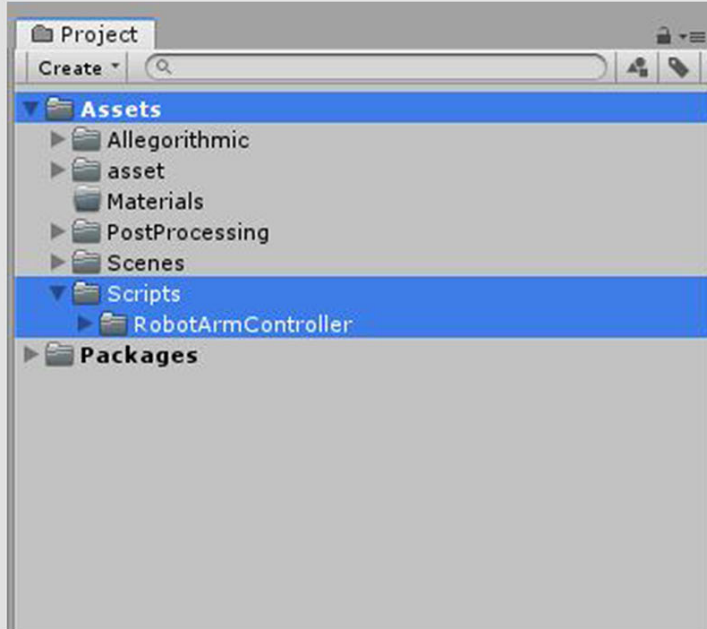

By default the sliders each have default limited to ensure that the range of motion doesn't go beyond what the robot is capable of going.

However the limits can be edited via the Robot Arm Description (Script)

IMPORTANT NOTICE:

When installing this package the "Scripts" folder should be at the root of "Assets"
